

Amend claim 1 as follows:

1. A transmission-drive unit for a seat adjustment or a servo steering, comprising a transmission housing; a driven shaft extending outwardly beyond said transmission housing; a driven wheel non rotatably arranged on said driven shaft; a supporting element which [directly] at least partially surrounds said driven shaft [so that], said driven wheel [is] being directly supported against said supporting element by axial force action from outside.

Amended claim 1:

- A/
